Subject:

**Statement of AERECO SA company concerning the compliance with CE marking requirements and compliance with the European directives.**

The CE marking was established under the harmonization of the European technical legislation. The CE marking is not a certification mark or an indication of the geographical origin of the product; it is a regulatory marking that does not imply that the product was manufactured in the European Union. A product labelled "CE" meets certain technical standards and acquires the right to free circulation throughout the territory of the European Union.

The products manufactured by Aereco SA company meet the European directives when they apply, including:

- EMC Directive (Electromagnetic Compatibility) No 2004/108 /CE
- BT Directive (Low Voltage) No 2006/95 / CE
- Machinery Directive 2006/42 / CE

With specific regard to our range of air inlets and their accessories, there is no harmonized standard within the meaning of Council Directive of 21 December 1988 to approximate the laws of the Member States relating to trade marks (89/104/EEC). Therefore, it is not possible to apply the CE mark on our air inlets and on their accessories. It is the same for the exhaust units having no electrical device (eg humidity sensitive exhaust unit).

However ventilation terminals (air inlets and exhaust units) manufactured by Aereco SA fit in perfectly in the European regulatory framework as they are tested according to EN13141 standards:

- EN 13141-1 Ventilation for buildings. Performance testing of components / products for residential ventilation. Part 1: Externally and internally mounted air transfer devices
- EN 13141-2 Ventilation for buildings - Performance testing of components / products for residential ventilation - Part 2: exhaust air and supply
